Software Developer | Full-Stack Developer | Java | Python | PHP | SQL

PROFESSIONAL SUMMARY

Diploma in Computer Engineering graduate (2024) with hands-on project experience across full-stack development — building responsive frontends, RESTful integrations, and database-driven backends in Java, Python, PHP, and C#. Skilled in SQL, Firebase, and API integration, with strong fundamentals in CRUD architecture, authentication, and version control. Seeking an entry-level Software Developer / Full-Stack Developer role to apply practical development and problem-solving skills.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C#, JavaScript

Frontend Development: HTML5, CSS3, JavaScript, Bootstrap

Backend Development: PHP, RESTful API Development

Databases: SQL, Firebase (Realtime DB & Authentication)

Concepts & Practices: CRUD Operations, Authentication & Authorization, Exception Handling, OOP, Socket Programming

Tools: Git, GitHub

SOFTWARE DEVELOPMENT PROJECTS

Database-Driven Blogging Platform — Python, SQL

- Built a database-backed blogging system supporting full CRUD (Create, Read, Update, Delete) capabilities for blog posts and metadata management.
- Structured relational database schemas using SQL to store post records, timestamps, and relational details efficiently.
- Developed backend logic in Python to validate incoming payloads and interface securely with the SQL database engine.

E-Commerce Web Application — HTML, CSS, JavaScript, PHP, Firebase

- Developed a full-stack e-commerce web platform featuring user authentication, an interactive product catalog, and shopping cart management.
- Implemented secure real-time authentication workflows using Firebase Authentication for customer registration and session handling.
- Built dynamic frontend interfaces in JavaScript to handle state management for cart updates and item total calculations.
- Configured backend interactions using PHP and database services to persist product data and user transactions.

REST API Weather Application — C#, .NET, JSON

- Engineered a weather application that retrieves real-time meteorological metrics across global locations using a third-party REST API.
- Parsed structured JSON API responses to dynamically display temperature, humidity, and atmospheric conditions.
- Implemented exception and error handling to gracefully manage invalid input or failed network calls.

Multi-Threaded Chat Application — Java, Socket Programming

- Implemented a network chat application using Java TCP socket programming to enable real-time messaging between clients.
- Applied object-oriented programming concepts to isolate client/server connection logic and manage message buffers.

EDUCATION

Diploma in Computer Engineering

A.D.J. Dharmambal Polytechnic College, Nagapattinam • July 2021 – July 2024

CERTIFICATIONS & CODING PRACTICE

- Udemy: Java Developer, Python Developer, C & C# Developer (course completions)
- Active problem solver on HackerRank and LeetCode — regularly practicing data structures, algorithms, and core programming logic

LANGUAGES

Tamil, English
